

Lunar Surface Models in Raised Relief

Lunar Surface Models are fully three-dimensional scale representations of selected areas of the Moon. Vacuum-formed for low cost, they are shaded to enhance the relief and include a labeled map colored by height. Regions selected to be modeled include Constellation areas of interest. The complete collection is available for sale at

<http://www.lunarsurfacemodels.com>.

De Gerlache, Shackleton and Sverdlup; close-up of South Pole in 3D and shaded relief.
