Embryo vs. Chondrule

Abstract 2041 - What came first, the chicken or the egg? We can ask ourselves a similar question: what came first the chondrule or the planet? I captured the essence of my Master’s thesis work through acrylic medium incorporating my punk-rock personality as a chick (the world) crushing an egg (chondrule). This signifies that the planetary embryo bow shock model is a viable chondrule formation mechanism implying that rather being the building blocks of planets, chondrules were indeed by-products of planetary formation based on Mars-sized planetary embryos though larger embryos would be preferred.
