

PLANETARY SCIENCE RESEARCH DISCOVERIES WEBSITE

L. M. V. Martel and G. J. Taylor, Hawai'i Institute of Geophysics and Planetology, University of Hawai'i, 1680 East-West Road, POST 502, Honolulu, HI USA (linda@higp.hawaii.edu, gjtaylor@higp.hawaii.edu)

Science Communication is Part of the Process: The Planetary Science Research Discoveries (PSRD) website at www.psrд.hawaii.edu helps to maximize the reporting and propagation of scientific discoveries in planetary science to a broad audience. Using peer-reviewed publications as our source, with feedback from the authors, we craft headline articles, *CosmoSparks* short reports, and slide sets to explain what you do, how, and why to engage more people in the excitement of planetary science. This makes PSRD an easily accessible, credible resource of detailed information about cutting-edge research. Our readership comprises professionals in the subfields of planetary science and other sciences, and a public audience that includes educators and students. PSRD provides a readable and accurate synthesis of the science questions being pursued and why the work matters. It's part of the process of expanding science inquiry and expanding the reach of your work to more people.

www.psrд.hawaii.edu

Compelling Science Makes Fascinating Reading: PSRD covers these topics and more: Presolar Grains and Isotopic Anomalies; Radionuclides and Early Solar System Chronology; IDPs; Micrometeorites; Stardust; CAIs and Other Refractory Materials; Formation of Chondrules and Chondrite Precursors; Volatiles in the Solar System; Carbonaceous Chondrites and Their Parent Body Evolution; Organic Material in Meteorites; Vesta; Ceres; Achondrites; Martian Meteorites; Lunar Samples and Meteorites; Origin and Evolution of the Moon; Iron and Stony-Iron Meteorites; Parent Body Processes; Isotopic, Chemical, and Experimental Studies of Meteorites; Exposure History and Delivery of Meteorites from Asteroids; Asteroids and Comets; Physical Properties of Meteorites; Impact Cratering Processes and Dynamics of Small Bodies; Shock Metamorphism; Developments in Analytical Techniques for Meteorite and Returned Sample Analysis; Meteorite Fall/Finds. This list will look familiar to MetSoc meeting participants, as it is the list you saw during your abstract submission. The topics that matter to our science community also matter to professionals in other science fields and the public once they are exposed to it. An email we received stated, "If planetary science and space exploration are to compete successfully with other demands on the public purse, it will do so because sites like yours make the results of research accessible to laymen of all ages and levels of involvement. I was especially happy to see that links were made available to users who need a more detailed coverage of the research."

PSRD uses illustrations, animations, clear writing, and a glossary. We include citations to primary sources. The full PSRD archive is searchable by subject and by chronological order. Every meteorite named in a PSRD article or report has a direct link to its page in the Meteoritical Bulletin Database. Every PSRD article is included in the ADS (SAO/NASA Astrophysics Data System) online, searchable database for Astronomy and Astrophysics.

Extending Planetary Science: PSRD began in 1996. Today we average ~42,000 page views/month and thousands of monthly downloads of pdf and pptx files. The growing subscriber list of ~1400 comes from 57 countries and territories. We gratefully acknowledge NASA's Cosmochemistry Program, including grants NNX08AJ86G and NNX11AJ53G, for funding our first 20 years; and NASA's Emerging Worlds Program grant NNX16AM37G and Hawai'i Space Grant Consortium for ongoing support. We invite you to use PSRD as part of your communication process.
